

THE CROSSFUZE GUIDE

Meet **Flow** by ServiceNow.

A service desk, live in your
team's chat by tomorrow.

I can't connect
to the VPN.

You're all set.

Support, right where you work.

THOUGHT LEADERSHIP

Is ServiceNow finally the right size for you?

Jeslyn Carlson

VICE PRESIDENT, GROWTH & MARKET STRATEGY · CROSSFUZE

Many of the organisations we speak to have reached the same conclusion: ServiceNow sounds right, but it isn't built for a company our size.

They choose instead to run support through Slack messages, a shared inbox, and a spreadsheet someone set up years ago. It works, until the team grows and the same questions keep coming back.

Flow by ServiceNow starts from a different question:

What if the service desk came to the conversation?

ServiceNow describes Flow as a conversational AI-native service desk. Employees ask in Slack, Microsoft Teams or email. Flow answers from existing knowledge, runs an automation when one exists, or gives teams the ability to “vibe code” new workflows using plain English.

For organisations new to ServiceNow, Flow is positioned as a standalone product. ServiceNow's launch materials say no CMDB, ITIL alignment or knowledge migration is required for that use case, and that Flow can be up and running in a day.

That is a meaningful change. The barrier was rarely whether a team wanted better support. It was everything that used to sit in front of it.

That changes the first question. It is no longer whether you can take on ServiceNow. It is where you should start.

Flow makes getting started simpler. Crossfuze helps you decide where to start. Which requests should Flow tackle first? What should it be allowed to do? Where should people stay involved? What could adoption mean for usage?

The same question comes up inside organisations that already run ServiceNow. For a satellite team or a department that can't wait for the platform roadmap, Flow isn't a replacement. It's a faster way in, syncing with your existing ServiceNow environment and using eligible Assists.

This guide sets out what ServiceNow has published about Flow: what it is, who it is for, how it works and what it costs. Where we add our own view, we say so. We have dated this guide as pricing and details will likely evolve.

Flow is in controlled availability today, with general availability for North America and EMEA expected in Q4 2026.

Whichever description fits your organisation, request early access with us. We will help you get the start right.

WHY A CONVERSATIONAL SERVICE DESK?

Work moved into conversation. Support should too.

Employees expect support in the tools they already use, not another portal. Flow by ServiceNow answers from your existing knowledge in the same thread, and runs an automation when one exists.

Ask in Slack, Teams or email. **Get it resolved there.**

AUDIENCES

Is Flow for us?

We're a small team with no service desk.

● SMALL AND LEAN TEAMS

We've never bought ServiceNow. It looked too heavy.

● NEW TO SERVICENOW

Our acquired team needs its own help desk, fast.

● EXISTING SERVICENOW CUSTOMERS

Can it help teams beyond IT?

● BEYOND IT

THE ANSWER

Flow could fit your team.

A help desk in Slack, Microsoft Teams or email, live in a day. No new infrastructure, no portal, no ServiceNow instance needed. Built for IT today, with more teams planned.

Request early access →

30-day free trial · No credit card · Limited release

FLOW BY SERVICENOW GETTING STARTED

Deployed in a day.

Four steps. Start resolving. Connect Flow to the tools, knowledge and systems you already use. No traditional service-management project first.

Flow by ServiceNow can be up and running in a day.

**No implementation project.
No new infrastructure.**

FLOW BY SERVICENOW EMPLOYEE EXPERIENCE

The shared inbox stops being your service desk.

Employees ask in chat. Flow answers, acts and hands off.

CONVERSATIONS

Support where people already work

No portal. No form. Employees ask in Slack, Microsoft Teams or email. Flow by ServiceNow keeps the request in the conversation instead of sending them to another portal.

Resolution Answers from your existing knowledge and runs an automation when one exists.

Any channel Slack, Microsoft Teams or email. One experience across every channel.

Open by design Connect bots and AI assistants to Flow through MCP and APIs.

AUTO-RESOLUTION

Never solve the same problem twice

Tell Flow what to automate in plain language, from onboarding to software access. Once the automation exists, Flow takes the next action itself, so repeat requests stop being repeat work.

Source: Flow by ServiceNow Features page.

AUTOMATIONS

Describe it, don't build it.

Say what you want to happen in plain language. Flow builds the automation, while admins control the limits and safeguards.

Create Describe what you want to happen in plain language. Flow builds it.

Adjust Walk through each step and change what you need before publishing.

Test Run it safely before the first real request reaches it.

INTELLIGENCE

AI for both sides of the service desk.

Flow by ServiceNow works for the person asking and the person answering. Admins decide how it behaves for each team.

Helper Answers employee questions in chat.

Resolver Completes requests when Flow has the answer or automation.

Builder Turns plain-language instructions into automations.

Coach Helps teams get more value from Flow.

Source: Flow by ServiceNow Features page.

INTEGRATIONS

Connect your tools. Rebuild nothing.

Connect Flow to the systems that already hold your identity, knowledge, assets and tickets. No migration required to get started.

Prebuilt 100+ ready-made integrations for the tools your teams already use.

Permission Each connection stays scoped to the team that needs it.

ServiceNow Sync Keep tickets, assets, knowledge and Assist usage connected.

FLOW BY SERVICENOW PRICING

Clear pricing. Usage-based.

Start small. Pay for what gets used. Flow is priced on conversations and automations, not seats, so your spend follows real usage.

NEW TO SERVICENOW

PAY IN USD

30 days

Free trial, no card

\$10K

Annual commitment

\$2

Per conversation

\$1

Per automation run

\$1K

Top-up packs

[Request early access →](#)

EXISTING SERVICENOW CUSTOMER

PAY IN SERVICENOW AI CREDITS (ASSISTS)

10

Assists per conversation

5

Assists per automation run

Flow runs alongside your existing ServiceNow. What you can use depends on your current AI SKU; some customers need an extra Assist pack.

CROSSFUZE VIEW

We'll estimate your usage before you commit.

[Talk to Crossfuze →](#)

WHAT COUNTS AS USAGE

Two simple units.

Conversation

One employee issue, handled by AI or a person. Charged once, however it starts. Automations inside the conversation are included.

\$2 each, or **10 Assists** for existing ServiceNow customers

Automation run

A Flow automation triggered outside an employee conversation, such as by MCP, an API or an agent.

\$1 each, or **5 Assists** for existing ServiceNow customers

HOW CROSSFUZE CAN HELP

Know your likely usage before you commit.

We help you choose where to start, model your usage and buy the right subscription, so Flow goes live with no surprises.

01

Select your use cases

Pick where Flow removes the most friction first.

Select use cases

- ☒ Password resets
- ☒ Access requests
- ☐ Hardware requests
- ☐ Onboarding

02

Add your volumes

Add expected conversations and automation runs.

FLOW BY SERVICENOW, ANSWERED DIRECTLY

The questions people ask before they start.

Six practical questions to help you decide whether Flow fits your team and how to start.

01

Do we need an existing ServiceNow instance?

No. Flow can run standalone for a team new to ServiceNow, or complement an existing environment. Start with a defined team and a set of repeatable requests.

02

What can it automate, and who stays in control?

Flow can answer from connected knowledge and run automations for repeatable requests. Admins set safeguards, review and test automations, and keep approval or human handoff where needed.

03

How quickly can we get started?

ServiceNow says Flow can be live in a day with one admin. Your launch timing depends on access, connections and the first use cases. Confirm these before committing to a date.

04

How should we budget for usage?

Forecast conversations and standalone automation runs. New customers have a \$10K annual commitment that renews yearly, with rates of \$2 and \$1 respectively. Eligible existing customers use 10 and 5 Assists. Automations within a conversation are included.

05

Can we access the free trial in the UK?

Flow is in controlled availability. ServiceNow advertises a 30-day trial with no credit card required; access is confirmed individually. North America has initial priority, with general availability for North America and EMEA expected in Q4 2026.

06

Where does Crossfuze help us start?

From early access to a pre-launch workshop for your team. See the next page for how we help. ServiceNow controls product access and the official trial.

For the latest detail: availability, pricing and commercial terms should be confirmed when access is requested.

Sources: Flow by ServiceNow homepage, Features page, Pricing page and ServiceNow launch materials. Availability, pricing and commercial terms are time-sensitive and should be confirmed when access is requested.

WHY REQUEST EARLY ACCESS THROUGH CROSSFUZE?

CERTIFIED FLOW BY SERVICENOW VENDOR

Early access. No queue.

Request through Crossfuze and skip the line. We get you into the free 30-day trial ahead of the queue.
